ISSN 2040–1604

A National Statistics publication

National Statistics are produced to high professional standards set out in the [Code of Practice](#) for Official Statistics. They are produced free from political influence.

The United Kingdom Statistics Authority has designated these statistics as National Statistics, in accordance with the Statistics and Registration Service Act 2007 and signifying compliance with the Code of Practice for Official Statistics.

Designation can be broadly interpreted to mean that the statistics:

- meet identified user needs;
- are well explained and readily accessible;
- are produced according to sound methods, and
- are managed impartially and objectively in the public interest.

Once statistics have been designated as National Statistics it is a statutory requirement that the Code of Practice shall continue to be observed.

About us

The Office for National Statistics

The Office for National Statistics (ONS) is the executive office of the UK Statistics Authority, a non-ministerial department which reports directly to Parliament. ONS is the UK government's single largest statistical producer. It compiles information about the UK's society and economy, and provides the evidence-base for policy and decision-making, the allocation of resources, and public accountability. The Director-General of ONS reports directly to the National Statistician who is the Authority's Chief Executive and the Head of the Government Statistical Service.

The Government Statistical Service

The Government Statistical Service (GSS) is a network of professional statisticians and their staff operating both within the Office for National Statistics and across more than 30 other government departments and agencies.

UK Economic Accounts

Coverage: UK

Date: 30 June 2017

Geographical Area: UK

Theme: Economy

Overview of the UK Economic Accounts

The UK Economic Accounts (UKEA) provides detailed estimates of national product, income and expenditure, UK sector accounts and UK balance of payments. UKEA is published at quarterly, [pre-announced](#) intervals alongside the [Quarterly National Accounts](#) and quarterly [Balance of Payments](#) statistical bulletins.

The UKEA includes income, capital and financial accounts which are produced for non-financial corporations, financial corporations, central government, local government, and households and non-profit institutions serving households (NPISH) sectors, and for the UK. Financial transactions and balance sheets are produced for the rest of the world sector in respect of its dealings with the UK. These accounts are the underlying data that produce a single estimate of gross domestic product (GDP) using income, production and expenditure data.

The accounts are fully integrated, but with a statistical discrepancy, known as the statistical adjustment, shown for each sector account. This reflects the difference between the sector net borrowing or lending from the capital account and the identified borrowing or lending in the financial accounts, which should theoretically be equal.

The integrated economic accounts

The integrated [economic accounts](#) of the UK provide an overall view of the economy. The accounts present a summary view of the accounts, balancing items and main aggregates and shows how they are expressed.

The accounts are grouped into 4 main categories

- the goods and services accounts
- current accounts
- accumulation accounts
- balance sheets.

All the above accounts appear in the annual UK [National Accounts](#) (Blue Book) – a link to the latest publication can be found [here](#). Due to time constraints and availability of data, the quarterly UKEA

does not publish the goods and services account, or the first account of the current accounts (the production account), but the remaining accounts (Accounts II to V) are published.

Further information can be found on the [UK sector accounts](#) webpage.

1. Current account

a. The distribution and use of income accounts (Account II)

The distribution and use of income account shows the distribution of current income (value added) carried forward from the production account and has saving as its balancing item (B.8). Saving is the difference between income (disposable income) and expenditure (or final consumption).

The distribution of income is broken down into 3 sub-accounts

- the primary distribution of income
- the secondary distribution of income
- the redistribution of income in kind.

i. The primary distribution of income account

Primary incomes are accrued to institutional units due to their involvement in production or their ownership of productive assets, including:

- property income (from lending or renting assets)
- taxes on production and imports.

And excluding:

- taxes on income or wealth
- social contributions/benefits
- other current transfers.

The primary distribution of income shows the way these are distributed among institutional units and sectors. The primary distribution account is divided into 2 sub-accounts – the generation and the allocation of primary incomes.

ii. The secondary distribution of income account

The secondary distribution of income account shows how the balance of primary incomes for an institutional unit or sector is transformed into its disposable income by the receipt and payment of current transfers (excluding social transfers in kind).

The 2 further sub-accounts (the use of disposable income and the use of adjusted disposable income) look at the use of income for either consumption or saving.

iii. The redistribution of income in kind

The redistribution of income in kind account shows how gross disposable income of households and non-profit institutions serving households and of government are transformed by the receipt and payment of transfers in kind. The balancing item for this account is adjusted gross disposable income (B.7g).

2. The accumulation accounts (Accounts III and IV)

The accumulation accounts cover all changes in assets, liabilities and net worth. The accounts are structured into 2 groups.

The first group of accounts (Account III) cover transactions which would correspond to all changes in assets or liabilities and net worth that result from transactions and are known as the capital account and the financial account. They are distinguished to show the balancing item net lending/borrowing.

The second group of accounts (Account IV) relate to all changes in assets, liabilities and net worth due to other factors, for example, the discovery or re-evaluation of mineral reserves, or the reclassification of a body from one sector to another.

a. Capital account (Account III.1)

The capital account concerns the acquisition of non-financial assets (income creating or wealth only) such as fixed assets or inventories, financed out of saving, and capital transfers involving the redistribution of wealth. Capital transfers include, for example, capital grants from private corporations to public corporations.

The account shows how savings finance investment in the economy. In addition to gross fixed capital formation and changes in inventories, it shows the redistribution of capital assets between sectors of the economy and the rest of the world. If the balance on the account is negative, it is described as net borrowing and measures the net amount a unit or sector is obliged to borrow from others. If positive, the balance is described as net lending and measures the amount the UK or a sector has available to lend to others. This balance is also referred to as the financial surplus or deficit and the net aggregate for the 5 sectors of the economy equals net lending/borrowing from the rest of the world.

b. Financial account (Account III.2)

The financial account shows how net lending and borrowing are achieved by transactions in financial instruments. The net acquisitions of financial assets are shown separately from the net incurrence of liabilities. The balancing item is net lending/borrowing. In principle, net lending or borrowing should be identical for both the capital account and the financial account. In practice, however, due to errors and omissions this identity is very difficult to achieve for the sectors and the economy as a whole. The difference is known as the statistical discrepancy.

c. The balance sheet (Account IV)

The second group of accumulation accounts complete the sequence of accounts. Included in these accounts are the balance sheets and a reconciliation of the changes that have brought about the change in net worth between the beginning and end of the accounting period. The opening and closing balance sheets show how total holdings of assets by the UK or its sectors match total liabilities and net worth (the balancing item). Net worth equals changes in assets less changes in liabilities.

Various types of assets and liabilities can be shown in detailed presentations of the balance sheets. Changes between the opening and closing balance sheets for each group of assets and liabilities result from transactions and other flows recorded in the accumulation accounts, or reclassifications and revaluations.

The rest of the world account (Account V)

The rest of the world account covers the transactions between resident and non-resident institutional units and the related stocks of assets and liabilities. Written from the point of view of the rest of the world, the account is similar in role to an institutional sector.

Codes used in tables

The codes used are consistent with the European System of Accounts, revised 2010 (ESA2010).

The ESA 2010 code for each series is shown in the tables, using the following prefixes

- S for the classification of institutional sectors,
- P for transactions in products,
- D for distributive transactions,
- F for transactions in financial assets and liabilities,
- K for other changes in assets,
- B for balancing items and net worth.

Within the financial balance sheets, the following prefixes are used

- AF for financial assets/liabilities

More information on ESA2010, along with a [downloadable manual](#), can be found on the [European Union's Eurostat page](#)

Financial intermediation service charge indirectly measured

Financial intermediation service charge indirectly measured (FISIM) is the process whereby a financial institution such as a bank accepts deposits from units (people and institutions) wishing to receive interest on funds, and lends them to units wishing to borrow.

The bank acting as an intermediary provides a mechanism to allow the first unit to lend to the second. The unit lending funds accepts a rate of interest lower than that paid by the borrower. A 'reference rate' of interest is the rate at which both lender and borrower would be happy to strike a deal. The difference between interest calculated at the reference rate and interest actually paid to depositors and charged to borrowers is a financial intermediation service charge indirectly measured. Total FISIM is the sum of the implicit fees paid by the borrower and the lender.

FISIM are produced by deposit-taking corporations except the central bank (S.122); and other financial intermediaries, except insurance corporations and pension funds (S.125).

Interbank FISIM are the FISIM produced between financial intermediaries (FIs). By convention, no interbank FISIM has to be calculated between resident FIs, nor between resident FIs and non-resident FIs. FISIM are calculated in respect of non-bank user institutional sectors only. FISIM are allocated into intermediate and final consumption.

There is a full description of the implementation of FISIM in the article, 'Improving the measurement of banking services in the UK National Accounts. Economic and Labour Market Review', ([Link: <http://webarchive.nationalarchives.gov.uk/20160105160709/http://www.ons.gov.uk/ons/guide-method/method-quality/specific/economy/national-accounts/articles/2011-present/national-accounts-articles---changes-to-financial-intermediation-services-indirectly-measured.pdf>](http://webarchive.nationalarchives.gov.uk/20160105160709/http://www.ons.gov.uk/ons/guide-method/method-quality/specific/economy/national-accounts/articles/2011-present/national-accounts-articles---changes-to-financial-intermediation-services-indirectly-measured.pdf))

Quality

Important quality issues

Common pitfalls in interpreting series are;

- expectations of accuracy and reliability in early estimates are often too high
- revisions are an inevitable consequence of the trade off between timeliness and accuracy
- early estimates are based on incomplete data

Very few statistical revisions arise as a result of 'errors' in the popular sense of the word. All estimates, by definition, are subject to statistical 'error', but in this context the word refers to the uncertainty inherent in any process or calculation that uses sampling, estimation or modelling. Most revisions reflect either the adoption of new statistical techniques, or the incorporation of new information which allows the statistical error of previous estimates to be reduced. Only rarely are there avoidable 'errors' such as human or system failures, and such mistakes are made clear when they do occur.

GDP quarterly alignment adjustments

To improve the coherence of the quarterly accounts, adjustments are made to quarterly estimates of both the expenditure and income analyses of GDP for 1983 onwards. These adjustments, which sum to zero across each complete year, are attributed to the change in inventories component of GDP analysed by expenditure and to gross operating surplus of companies component analysed by income. These adjustments may be considered as allowing for timing differences in the recording of transactions in different parts of the economy.

In addition, accurate quarterly measurement is more difficult for the changes in inventories component. These quarterly adjustments modify the aggregates derived from expenditure or income components to better reflect the quarter-to-quarter paths of the output measure of GDP.

Income, product and spending per head

The annual per head data in Table 1.1.5 is calculated using mid-year population estimates. The quarterly per head series will not sum to the annual total as the quarterly series use constructed population numbers estimated using successive annual mid-year population figures.

National Accounts methodology and articles

We regularly publish [methodological information and articles](#) to give users more detailed information on developments within the National Accounts. We also publish supplementary analyses of data to help users with the interpretation of statistics and guidance on the methodology used to produce the National Accounts.

National Accounts classification decisions

The UK National Accounts are produced under internationally agreed guidance and rules set out principally in the [European System of Accounts \(ESA 2010\)](#) and the accompanying 'Manual on Government Deficit and Debt -Implementation of ESA 2010'.(*Link to Government Deficit manual: [Office for National Statistics](http://ec.europa.eu/eurostat/en/web/products-manuals-and-guidelines/product?p_auth=Khlyd5f4&p_p_id=estatsearchportlet_WAR_estatsearchportlet&p_p_lifecycle=1&p_p_state=maximized&p_p_mode=view&_estatsearchportlet_WAR_estatsearchportlet_action=search&text=Manual+on+Government+Deficit+and+Debt+-+Implementation+of+ESA10+-+2013+edition</i>)</p></div><div data-bbox=)*

In the UK, ONS is responsible for the application and interpretation of these rules. Therefore ONS makes [classification decisions](#) based upon the agreed guidance and rules, and these are published on our website.

Economic context

ONS publishes a monthly [Economic Review](#) discussing the economic background, giving economic commentary on the latest GDP estimate and our other economic releases.

Seasonal adjustment

Seasonal adjustment aims to identify, estimate and remove regular seasonal fluctuations and calendar effects from time series data (data that are collected at regular intervals form a time series). Regular seasonal fluctuations are those movements which, on the basis of the past movements of the time series, can generally be expected to reoccur in a similar way in the same period each year.

Calendar effects include impacts caused by the number of working days or calendar days in the month or the dates of particular occasions, such as Easter, within the year. The influence of such effects on a particular month can vary from year to year but they are able to be quantified and adjusted.

When to use seasonally adjusted data

Data that are collected at regular intervals form a time series. The ONS publishes quarterly and annual time series within the UKEA. Those analysing a time series will usually be looking to see what the short and long term movements in the series are and whether any unusual occurrences have had any major effect on the series. This type of analysis is not easy using raw time series data because there will normally be short-term effects associated with the time of year that will obscure other movements. For example, retail sales will go up in December due to the effect of Christmas.

The purpose of seasonal adjustment is to remove the variations associated with the time of the year. If you are interested in comparing consecutive months or quarters, the seasonally adjusted time series will provide a more reliable estimate of change.

Availability of seasonally and non-seasonally adjusted data

ONS publishes quarterly and annual non-seasonally adjusted (NSA) data for all series within the UKEA and where they exist, the corresponding quarterly seasonally adjusted (SA) series also (not all time series data have seasonal patterns and hence the SA series are the same as the NSA series). The annual time series data is not seasonally adjusted across calendar years and so, for calendar years, the annual NSA and NSA data values are the same.

For the sector and financial accounts, the financial accounts and balance sheet quarterly and annual time series data are all non-seasonally adjusted. The income and capital accounts contain both seasonally (where appropriate) and non-seasonally adjusted quarterly and annual time series.

UKEA long run time series data

The UKEA is published at the end of every quarter throughout the year and our [release calendar](#) sets out the forthcoming publication dates up to a year in advance. This provides users with a regular and consistently available set of comparable economic time series data.

All time series data published within the UKEA are available back to 1987 on a quarterly and annual basis with many of the time series having data as far back as 1948 annually and 1955 quarterly.

Users and uses of the UKEA

Data published in the United Kingdom Economic Accounts (UKEA) has a broad range of users. These include other government departments, the Bank of England (BoE), Office for Budget Responsibility (OBR), knowledge and research institutions, financial and non-financial corporations, journalists, the general public, and international institutions.

UKEA data are widely used by government departments to inform and monitor the effect of policy decisions. UKEA data also aid an assessment of the economy: informing the Bank of England's Monetary Policy Committee (MPC) discussions when setting monetary policy and the OBRs forecasts and evaluations of economic growth and public sector finances. The data is also used by knowledge and research institutions such as think-tanks, lobby groups and universities and by researchers, analysts, academics, students and trade organisations.

The UKEA also provides businesses with key statistics and often form the basis on which journalists publish reports and articles. Data series commonly of interest include real household disposable income, gross saving, the household saving ratio, financial wealth and balance of payments data. The UKEA also contain useful information on the holdings of debt for each sector of the economy.

Key users of the UKEA outside of the UK include international bodies such as Eurostat, the European Central Bank (ECB), the Organisation for Economic Cooperation and Development (OECD) and The World Bank. These organisations also use the UKEA to inform and monitor the effect of policy decisions at an international level and to create international comparisons of key economic measures such as Gross Domestic Product (GDP) and Gross National Income (GNI); GNI data provided to Eurostat is used in the calculation of a Member State's contribution to the European Union (EU) budget.

Confidentiality

We are committed to ensuring all information provided is kept strictly confidential and will only be used for statistical purposes. Further details regarding confidentiality can be found in the respondent charters for [businesses](#) and [households](#) on our website.

Notes

1. Most quarterly data are available seasonally adjusted: those not seasonally adjusted are indicated.
2. Rounding may lead to inconsistencies between the sum of constituent parts and the total in some tables.
3. 'Billion' denotes one thousand million.
4. Symbols used:
 - .. not available
 - nil or less than half the final digit shown

Periods covered

- 'Q1' or 'Quarter 1' refers to the first quarter of the calendar year, and includes the months January, February and March
- 'Q2' or 'Quarter 2' refers to the second quarter of the calendar year, and includes the months April, May and June
- 'Q3' or 'Quarter 3' refers to the third quarter of the calendar year, and includes the months July, August and September
- 'Q4' or 'Quarter 4' refers to the fourth quarter of the calendar year, and includes the months October, November and December

Background notes

Details of the policy governing the release of new data are available by visiting the [Statistics Authority code of practise webpage](#) or from the Media Relations Office email: media.relations@ons.gsi.gov.uk

These National Statistics are produced to high professional standards and released according to the arrangements approved by the UK Statistics Authority.

Special events

The ONS policy on special events can be found [here](#). Special events are events that are identifiable, do not occur on a regular cycle and have at least the potential to have an impact on statistics.

Notices for this publication

1. Correction - financial corporations gross operating surplus, percentage change, latest quarter on corresponding quarter of previous year

A processing error has been identified in the presentation of the financial corporations gross operating surplus, percentage change, latest quarter on corresponding quarter of previous year (CDID KH3P - Table 1.1.11). Data presented previously related to total imports four quarter growth rate. This error has been corrected in this publication, the United Kingdom Economic Accounts published on 30 June 2017. No other series or publications are impacted by this error.

ONS apologises for any inconvenience

2. Revisions period

There have been no revisions to previously published data in this publication.

3. Quality review of purchased software within gross fixed capital formation (GFCF)

Following a quality review, it has been identified that the methodology used to estimate elements of purchased software within gross fixed capital formation (GFCF) has led to some double-counting from 1997 onwards. When this issue is resolved in Blue Book 2017 it will reduce the level of GFCF across the period by around 1.1% per year. The average impact on quarter-on-quarter GFCF growth is negative 0.02% and the average impact on quarter-on-quarter GDP growth is 0.00%.

4. Population estimates

The UK resident population mid-year estimates used in this publication (in Table 1.1.5) are those published on 23 June 2016. The latest population estimates published on 22 June 2017 will be included in quarterly national accounts on 29 September 2017.

5. Improvements to National Accounts methodology

There will be methodological improvements incorporated into the next publication of the United Kingdom Economic Accounts (2017 quarter 2, published 29 September, 2017). These improvements will also be incorporated into the United Kingdom National Accounts (the 'Blue Book') 2017, to be published 31 October 2017.

An explanation of the changes for the period 1997 to 2012, along with the publication dates for further articles, can be found in [this link](#).

6. Improvements to earnings estimates of average weekly earnings

Average Weekly Earnings (AWE) is a key economic indicator designed to capture changes in the average earnings of employees in Great Britain. A review of the methodology used to calculate estimates for small businesses was carried out in 2016. As a result, planned improvements have been made in the [UK labour market release](#) and an [article explaining these planned improvements to Average Weekly Earnings](#) was published on 29 March 2017.

In National Accounts, these improvements affect both the output measure of GDP, within the deflators used in the construction and services components, and the income measure of GDP, within the compensation of employees and other income components. Further details can be found in the income approach sections of the [Quarterly National Accounts Statistical Bulletin](#), within section 3, “UK GDP growth is unrevised in Quarter 1 (Jan to Mar) 2017” and “upcoming changes”.

7. Addition of Tables I, J, K and AH from Quarterly Sector Accounts bulletin

From this quarter onwards, the United Kingdom Economic Accounts will include tables that are also published in the Quarter Sector Accounts bulletin. These tables are:

Table I	Net lending/net borrowing by sector from the capital account
Table J1	Households and Non-Profit Institutions Serving Household (NPISH) - Allocation of Primary Income Account
Table J2	Households and NPISH Sector - Secondary Distribution of Income Account
Table J3	Households and NPISH - Sector Use of Disposable Income Account
Table K1	Private Non-Financial Corporations Sector - Allocation of Primary Income Account
Table K2	Private Non-Financial Corporations Sector - Secondary Distribution of Income Account
Table PH	Disposable Income Per Head
Table AH	UK Sector Revisions from Previous Estimates

These can be found towards the end of this publication.

8. Pre-release access to ONS statistics

On 15 June 2017, the [National Statistician announced](#) that pre-release access to ONS statistics will stop with effect from 1 July 2017.

The United Kingdom Economic Accounts dataset is produced by ONS with a quality assurance role provided by members of the Government Statistical Service (GSS) working in both ONS and HM Treasury. GSS staff will continue to work together to provide this quality assurance role but ministers and those officials not directly involved in the production and release of statistics will not have access to those statistics in advance of publication.

Links to associated bulletins and further analysis

These links contain further analysis and background of the data contained within this release

[United Kingdom Economic Accounts](#) – The UK economic accounts data in this publication is available online to download in xlsx, csv and structured text file formats.

[Quarterly Sector Accounts Statistical Bulletin](#) – Detailed coverage of the sector accounts covering all institutional sectors. From March 2017 the sector accounts content contained within the Quarterly National Accounts Statistical Bulletin will move to its new home within the Quarterly Sector Accounts Statistical Bulletin.

[Quarterly National Accounts Statistical Bulletin](#) - A detailed breakdown of the components of GDP as well as key sector accounts aggregates. From March 2017 the sector accounts content contained within the Quarterly National Accounts Statistical Bulletin will move to its new home within the Quarterly Sector Accounts Statistical Bulletin.

[Balance of Payments Statistical Bulletin](#) - Trade in goods and services, income, current and capital transfers, transactions in UK external assets and liabilities, and levels of identified assets and liabilities are detailed within the current account.

[Business Investment Statistical Bulletin](#) - Investment trends for businesses. Contains capital expenditure data at current prices, constant prices and seasonally adjusted.

[Profitability of UK Companies Statistical Bulletin](#) - The net rate of return on capital employed for UK PNFCs' related to their UK operations.

[UK Trade Statistical Bulletin](#) - Monthly statistics on trade in goods classified according to Standard International Trade Classification (SITC) as well as monthly estimates for total trade in services.

[Consumer Trends Statistical Bulletin](#) - Household Final Consumption Expenditure (HFFCE) for the UK. The main tables include all expenditure on goods and services by members of UK households.

[Public Sector Finances Statistical Bulletin](#) - UK Public Sector current budget, net borrowing, net cash requirement and net debt are provided in this release. Data tables are provided.

[Economic Review](#) - Economic commentary on the latest GDP estimate and other ONS economic releases.

[Glossary](#) – Glossary of terms used in the UK national accounts

1 Estimates given to nearest million but cannot be regarded as accurate to that degree

2 Non-profit institutions serving households

3 Quarterly alignment adjustment included in this series

4 Acquisitions less disposals of valuables can be a volatile series due to the inclusion of non-monetary gold, but any volatility is likely to be GDP neutral as this is offset in UK trade figures

1.1.2 Gross domestic product: by category of expenditure¹

continued

£ million at chained volume measures (reference year 2013)

National expenditure on goods and services at market prices

	National expenditure on goods and services at market prices												Statistical discrepancy (expenditure)	Gross domestic product at market prices	
	Final consumption expenditure				Gross capital formation										
	Households	Non-profit institutions ²	General government	Gross fixed capital formation	Of which business investment	Change in inventories		Acquisitions less disposals of valuables ⁴	Total	Exports	Gross final expenditure	Less imports	Total

1 Estimates given to nearest million but cannot be regarded as accurate to that degree

2 Non-profit institutions serving households

3 Quarterly alignment adjustment included in this series

4 Acquisitions less disposals of valuables can be a volatile series due to the inclusion of non-monetary gold, but any volatility is likely to be GDP neutral as this is offset in UK trade figures

1.1.2 Gross domestic product: by category of expenditure¹

1 Estimates cannot be regarded as accurate to the last digit shown.

3 Weights may not sum to the totals due to rounding.

2 Components of output are valued at basic prices, which excludes taxes and subsidies on production.

1.1.6 Gross value added by category of output^{1,2}

1 Estimates cannot be regarded as accurate to the last digit shown.

2 Components of output are valued at basic prices, which excludes taxes and subsidies on production.

3 Weights may not sum to the totals due to rounding.

4 Comprising sections R, S and T of SIC(2007).

1 The residual error is, by convention, the amount by which the expenditure-based approach to measuring GDP exceeds the income-based estimate. It is also the sum of two components: the statistical discrepancy (expenditure) with sign reversed, and the statistical discrepancy (income) with natural sign.

2 Income data deflated by the implied GDP deflator, based on expenditure data.

¹ Interest payments in the National Accounts are separated into two elements; the underlying interest charge and the financial service charge. Interest under D.41 in the allocation of primary income is measured separately to the service charge element of the transaction. Users of this table are advised to also use the individual sector tables which show the actual interest payments and receipts of each of the institutional sectors.

1 Using series YBHA: GDP at current market prices

2 When downloading data from the UKESA dataset users should reverse the sign of series that have an identifier that is prefixed with a minus sign.

3 This series represents net errors and omissions in the balance of payments accounts. It is the converse of the not seasonally adjusted current and capital balances (HB OG and FKMJ) and net financial account transactions (HBNT) and is required to balance these three accounts.

1 Includes transactions with European Union institutions.

2 Transactions with non-EU countries continue to be shown in tables B6B and B6C.

3 EMU members : Austria, Belgium, Cyprus, Estonia, Finland, France, Germany, Greece, Irish Republic, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Portugal, Slovakia, Slovenia and Spain.

4 Lithuania became a member of the EMU on 1 January 2015. The table presents EMU19 figures for 2014Q1 to 2015Q1 and EMU18 figures for 1999Q1 to 2013Q4. ONS will publish EMU19 figures for the full time series within the 2015Q2 publication in September 2015.
